

**FOR IMMEDIATE PRESS RELEASE:
Rear Disc Brake Kit with Parking Brake**

Camarillo, CA March 19, 2003

These new one-piece rear brake kits from Wilwood Engineering with internal parking brake provide increased performance with plenty of wheel clearance for a clean, unique custom look. The complete parking brake assembly provides outstanding holding power, is neatly concealed inside the one-piece rotor/hat, and is spring loaded for positive release without rattling. Smooth faced iron, solid or vented rotors are supplied standard. Drilled and slotted rotors are optional providing increased airflow for optimum pad performance, and are e-coated to prevent corrosion while maintaining show quality appearance with any custom wheel package.

Strong, lightweight [Forged Billet Dynalite](#) Four Piston Calipers in a choice of black, red, or styled polished finish complete the package. Assembly is fast and easy with direct bolt-on for most popular axles and easy compatibility with aftermarket parking brake cables. This bolt on kit includes vented rotors, calipers, BP-10 compound brake pads and complete instructions.
