

FOR IMMEDIATE RELEASE:

Wilwood Disc Brakes Introduces Revolutionary New Brake System for Custom Motorcycle from Wilwood

Camarillo, CA November 26, 2008

Wilwood Disc Brakes Who has been designing high performance brakes for 30 years, announces a new front brake system offering greater stopping power with a classic “no brake look” for custom V-Twins. As the name implies, the [Stealth Brake System](#) is virtually invisible, disappearing into a unique front wheel design, which incorporates the rotor in a billet rim. The twin piston calipers and pads are mounted inboard on the fender mounts of the standard 41mm Wide Glide front forks adding to the clean, custom look for a wide variety of bikes. A billet aluminum axle clamp stabilizes the front fork assembly and allows the builder the option of including a front fender in his one off design.
