

**IMMEDIATE PRESS RELEASE:
Competition Road Race Systems for 1997-2010 Corvettes**

Camarillo, CA February 2, 2011

Wilwood has developed the ultimate competition brake systems specifically designed for road racing on production suspension based C5 and C6 Corvettes. Complete front systems are available configured with either four or six piston W4AR/ST (p/n [140-11822](#)) or W6AR/ST (p/n [140-10226](#)) calipers with Thermlock pistons, 14" SV-GT Series discs, PolyMatrix Type 6617 brake pads, dynamic hat two-piece rotor mounting, and all the necessary hardware for simple bolt-on installation in such categories as SCCA T1, STO, and all other sanctions that support this race platform. Custom brackets are also available to mount either caliper to any OE production C5 or C6 spindle for use in conjunction with readily available and affordable 340mm OE dimension front discs from a C6/Z51. Matched "Low-Inertia" rear kits, with 12.9" discs and four piston Superlite series radial mount calipers, are also available for any category not restricted to rear rotor diameters smaller than 12.88". All kits are fully compatible with the ABS and OE master cylinder output. Jacketed stainless steel braided brake flexlines can be ordered separately by model year to complete the installation.
