

**FOR IMMEDIATE RELEASE:
New NDL Narrow Mount Dynalite Caliper from Wilwood**

Camarillo, CA November 1, 2007

High strength with low weight for Late Models, Modifieds, Sprint cars, Off-Road and Road Racing. Wilwood's new [NDL caliper](#) features an FEA generated radial transition design that eliminates steps and shoulders in the area between the piston housing body and the caliper bridges. The radius in this transition area substantially increases resistance to deflection and caliper separation under severe load.

SRS stainless steel bridge plates are standard to reduce bridge wear and prolong caliper life. Internal fluid passages eliminate the need for external tubes. Four corner, two piece bleed screws assure effective air evacuation from the system and allow one caliper to be mounted in any front, rear left or right position.

The full range of PolyMatrix brake pads are available for most competition applications.
