

**FOR IMMEDIATE RELEASE:  
Wilwood's new D154 Rear Parking Brake Kits**

**Camarillo, CA, November 1, 2011**

Wilwood Engineering has recently introduced a new [D154 parking brake rear kit](#) that features the latest in disc brake technology. These kits are available for the popular Ford, GM, and Mopar muscle car rear wheel drive axles. These kits not only provide better performance, but also the advantages of a parking brake for situations where parking brake functionality is needed.

Kits feature Wilwood's forged billet D154 GM Metric 2-piston floating mount calipers in black powder coat. The floating caliper helps to minimize knock-back in axles that are prone to movement. Calipers work in conjunction with large 12.19" diameter ULHP plain face vented rotors. These kits come with an integral parking brake bracket which houses the drum shoe parking brake and all necessary hardware for an easy, bolt-on installation. Optional SRP drilled and slotted rotors as well as red powder coated calipers are also available.

Wilwood BP-10 high performance street pads round out the kit. Other brake pad compounds, including those for off-road applications, are also available. Stainless steel braided flexline hose kits are recommended, but not included with the kits. Wilwood offers universal flexline kits for 3/8-24 IF chassis fitting and 10mm x 1BF chassis fittings, call for details. All of Wilwood's performance brake kits are loaded with cutting edge technology built on years of domination in world motorsports. These kits will not only exceed your braking demands, on and off the track, but also enhance the appearance of your street/show vehicle.
