

FOR IMMEDIATE RELEASE:

Wilwood Racing Releases Tuning Brake Pad Compound for D-154 GM Calipers

Camarillo, CA • November, 2025

Wilwood Racing has developed a proprietary compound specifically for tuning chassis. Using compound **BP-00** brake pad in the right front caliper of GM Metric single piston floater, model **D-154**, will assist in turning the car in traction which is especially helpful on racetracks with tight left corners.

The high-resistance compound will generate heat without the coefficient of friction that other racing materials are designed to provide. The **BP-00** brake pads have excellent wear characteristics and are more rotor-friendly than higher-friction pads. The advanced friction material provides zero stopping power and effectively disables the right front caliper.

D-154 caliper Tuning Brake Pads are designed for racing applications, and are not intended for street use. The part number is sold as an individual wheel set.

MSRP: starts at \$86.34
