

FOR IMMEDIATE RELEASE:

Wilwood's new GP 310 Calipers for Harley-Davidson® Motorcycles

Camarillo, CA, January 1, 2012

Wilwood Engineering has recently introduced a new line of billet disc brake calipers designed and engineered specifically for 2008 – present Harley-Davidson® Motorcycles.

Built around a 4-piston, high performance powerhouse, these billet aluminum calipers bring distinctive, bolt-on styling: Direct leg-mounted calipers are available for all single and dual disc models (except Springer models).

The [GP 310 caliper](#) is available in polished, brilliant chrome or black finishes, with the added performance characteristics found in Wilwood's racing calipers: Stainless steel pistons to reduce brake fade while resisting corrosion. High temperature piston seals extend life, control retraction, and offer drag free operation. Additional features include chrome bleed screws and hardware, exclusive pad anti-rattle clip, and brake pads designed to operate in the widest range of temperatures and environments, utilizing our industry leading friction material, which is compatible with stainless steel rotors.

All of Wilwood's performance brake calipers are loaded with cutting edge technology built on decades of domination in world motorsports. This caliper will not only exceed your braking demands, but also enhance the appearance of your Harley.

Wilwood also offers a complete line of GP 310 calipers for earlier models of Harley-Davidson® Motorcycles. Please contact your Wilwood representative.
